onth	day	year	blurb Sovere thunderstorms produced many tornadoes ground control Illinois. The most intense tornade touched down in Montgomery County couth of Fermoreville, and moved into couthwest Christian	ke
б	1	1999	Severe thunderstorms produced many tornadoes around central Illinois. The most intense tornado touched down in Montgomery County south of Farmersville, and moved into southwest Christian County. One person was killed, when a semi-trailer was overturned at a rest area on I-55. Tornadoes also touched down east of Pana, in Shelby County. Across eastern parts of the state, high	24
		1000	winds up to 70 mph caused damage to trees, power lines, and some buildings. The Mattoon area also reported flooding from these storms, producing \$3 million damage.	
6	2	1990	A two-day outbreak of tornadoes in the central U.S. produced 64 twisters, including 12 in Illinois. One tornado touched down in Shelby County near Westervelt and took an 8 mile path near Lake Shelbyville to northeast of Findlay, destroying 16 homes and damaging 60 others. Two violent tornados, rated as a "4" on a scale of 0 to 5, moved across mainly rural areas of southeast Illinois; a third traveled 94 miles across southeast Illinois and southwest Indiana, causing extensive damage. In Edgar County, one tornado damaged 6 buildings near Grandview, and another tornado began an 11 mile track near Horace, damaging several farms.	24
6	3	1860	The "Great Tornado of the Northwest" (actually a complex family of tornadoes) moved from lowa into northern Illinois. The greatest death toll of 124 people occurred in an area extending from near Cedar Rapids, lowa, to Albany, Illinois (northeast of Moline). The death toll included 23 people on a raft, which was destroyed as the tornado moved across the Mississippi River.	24
6	3	1887	A tornado or waterspout touched down on the Wabash River, about 5 miles north of its mouth with the Ohio River. Three people drowned when a boat was overturned at Old Shawneetown.	25
6			Strong winds to near 60 mph affected a large areas of northern and east central Illinois. A 13-mile stretch of Interstate 57 was closed from Arcola to Mattoon due to blowing dust. Some damage occurred to trees, power lines, and roofs.	25
6			A severe weather outbreak occurred across portions of Missouri, Illinois, and Indiana. A tornado destroyed or unroofed homes at the edge of Kaskaskia, along the Mississippi River. Tornadoes also occurred near the Wabash River, across Lawrence and Wabash Counties. The tornado in Wabash County was reportedly a mile wide, and crossed into Indiana. Damage from this tornado in forested areas was reportedly still visible in 1876. Further south, a tornado crossing the Wabash River north of Shawneetown reportedly devastated the lower end of Wabash Island, killing 3 people on the Indiana side.	
6			A tornado of F4 intensity touched down just west of Mt. Carmel and moved east northeast, devastating the town. The tornado occurred in a heavily wooded area, and many trees were thrown long distances. After crossing the Wabash River, the tornado tracked for another 5 miles across Indiana before dissipating. 20 businesses and 100 homes were damaged or destroyed. At least 16 people, and as many as 30, were killed, with 100 injured.	2
6	4	1999	Several tornadoes touched down across central Illinois, as severe thunderstorms moved through the area. A tornado moved across northern parts of Lincoln, with extensive tree damage in a park. High winds also produced damage to residences and trees in Lincoln. Damage to trees also occurred in Delavan, where a tornado moved across the north side of town. Other tornadoes that day were mainly weak, and brief in nature.	2
6			A family of tornadoes tracked from southeast Missouri across the southern third of Illinois, and may also have moved into Indiana. These moved across the Mississippi River about 20 miles downstream from St. Louis. Fish were reportedly "scattered all over the prairie" on the Illinois side of the river. Some pine tree tops, not native to that area of Illinois, were believed to have been blown in from at least 50 miles away. The easternmost documented damage was south of present-day Albion, in Edwards County. A straight line between these areas would indicate the tornadoes also tracked across present-day Mount Vernon, but an exact track could not be determined due to lack of settlements in the area at the time.	
6			A strong tornado took a 55 mile path across east central Illinois, from Bloomington south-southeast to Farmer City to Sadorus. Although the tornado was on the ground only part of the time, major damage occurred to farmsteads near Farmer City, Ivesdale, and Sadorus.	2
6	6	1874	A tornado estimated to be F3 strength ripped apart the town of Tampico, in northwest Illinois. No deaths were reported, but 20 people were injured.	2
6			Hail up to 3-1/2 inches in diameter fell in St. Clair County, in the St. Louis metropolitan area. Major damage occurred in Belleville, Cahokia, Freeburg, and Millstadt. Crops were smashed, and trees were stripped of leaves. \$9 million damage was reported to vehicles, and \$4.5 million damage to buildings.	2
6			Strong thunderstorms pushed across southeast Illinois during the early morning, producing widespread rainfall of 3 to 7 inches. The highest total of 9.10 inches occurred south of Martinsville, in Clark County. Nearly 100 homes in the county were damaged from the resulting flash flooding, and every county road as well as portions of I-70 was closed due to high water.	
6			A violent tornado moved across Washington County, from near Covington to New Minden. Near the tornado's endpoint, 4 people were killed while running to their storm cellar. Another violent tornado in southern Clark County destroyed or damaged every building in Old York. The tornado tracked for 15 miles, crossing into Indiana.	2
6			Parts of the Chicago metropolitan area were flooded after thunderstorms produced 2-5 inches of rain in a 3 hour period. This type of a rainstorm in that area has an average occurrence rate of once every 30-60 years. Over the period of a day, up to 6.50 inches of rain fell, producing one of greater floods noted in that area.	
б			A single supercell thunderstorm developed over western Illinois and moved east to the Indiana border, producing 8 different tornadoes along its path, including some of the southern Chicago suburbs Four of the torndoes were rated EF-2 in strength.	
6			A tornado estimated to be F2 intensity moved across Springfield from southwest to northeast. The tornado was on the ground for 4 miles and unroofed homes, but no deaths or injuries were reported.	2
6			Severe thunderstorms in northeast and central Illinois produced hail the size of grapefruits at Kankakee. One tornado traveled along an 77 mile intermittent path from Brooklyn, in Schuyler County, east-southeastward to near Springfield. A second tornado was on the ground intermittently for 80 miles, originating southeast of Pekin and traveling to Mahomet, northwest of Champaign. Minor damage resulted from both tornadoes.	2
6	8	1993	Severe thunderstorms moved across northern and central Illinois during the early evening hours. The storms produced winds near 70 mph south of Springfield and west of Pawnee. A small tornado developed from the system and moved through Illiopolis, damaging over 5 dozen buildings. Other tornadoes touched down near Decatur and Champaign.  Springfield recorded a high temperature of 101 degrees, setting a record for the date. This was also the first triple-digit temperature recorded in the city since 1901.	
6	9	1911	Springfield recorded a high temperature of 101 degrees, setting a record for the date. This was also the first triple-digit temperature recorded in the city since 1901.	- 2
6			A tornado in Cook County produced intermittent damage from Hoffman Estates to the north edge of Prospect Heights. About 80 families were left homeless in Arlington Heights, after a home and several apartment buildings lost their roofs. Damage was estimated at \$4 million.	-
			A tornado touched down a few miles east of Canton and moved through Kingston Mines (southwest Peoria County). Two people were killed near Canton, but much of the damage occurred in the Kingston Mines area, where 16 homes were destroyed. 20 men and 18 engines were buried in the roundhouse there. Eight people were killed further east, when buildings were destroyed by strong winds.	
6	10	2008	Runoff from excessive rainfall over the previous week led to record flooding along the Embarras River at Ste Marie and Lawrenceville. A number of levee breeches occurred between the 8th and 10th along the Embarras and Wabash Rivers. In Lawrence County, 75 square miles were flooded as a result. In Lawrenceville, 158 homes were flooded in the first floor living area, with 48 others having basement flooding, and 8 businesses had in excess of 5 feet of water inside.	
6	11	1928	A tornado across far northeast Illinois moved across McHenry County, destroying a school, barn, and granaries near Harvard. Another tornado on May 18th of the same year affected areas a few miles to the north.	1
			Champaign's coolest June on record occurred in 1928, with an average temperature of 65.4 degrees, about 6 degrees below normal. Springfield and Peoria both established their second coolest June during this year.	
			A tornado destroyed 25 houses and damaged 50 others in Pana, in southeast Christian County. In some cases, it was hard to tell where the buildings had stood. The freight depot was unroofed, and freight cars blown off train tracks. A woman and three children were killed by a falling building.	
6	13	1976	A large, slow-moving tornado moved across parts of the southwestern Chicago suburbs, killing two people. The tornado, with winds over 200 mph, affected areas near Downers Grove. \$13 million damage occurred when 89 homes were destroyed and another 90 were damaged. The tornado passed over the Argonne National Laboratory, peeling part of a roof off the building housing a nuclear reactor. The tornado's movement was rather erratic; the tornado first moved southeast, then north, and then turned to the west.	r 2

4 1957 An F4 tomado moved across the south and southeast sides of Springfield. The tomado destroyed 25 bromes and severely damaged 175 others; property damage was around \$8 million. On the north side of town, the storms produced a wind gust of 98 mph at Capital Airprot, which still stands as Springfield's record wind speed. Two people died during the storm, with over 50 injured. A separate tomado touched down in downtown Jacksonville, destroying or damaging 40 buildings.  1 1974 A tomado touched down in downtown Jacksonville, destroying or damaging 40 buildings.  1 1974 A tomado took an intermittent 53 mile long path across northwest and west central filmois. The tomado first touched down just southeast of the Quad Cities, and moved southeast into Knox County.  2 1974 A tomado took an intermittent 53 mile long path across northwest and west central filmois. The season started with only 0.45 inch of rain in Peoria during June, a record for the month. Springfield reported 1.14 inches during the month, its 7th driest June on record.  3 1983 Besides record heat, the summer of 1935 was also noted for its dry weather. The season started with only 0.45 inch of rain in Peoria during June, a record for the month. Springfield reported 1.71 inches of rain during the month, setting a June record which also stands as the third wettest month ever in the Capital City, Peoria's total during the month was 11.18 inches under the capital city, Peoria's total during the month was 11.18 inches under the capital city, Peoria's total during the month was 11.18 inches under the capital city, Peoria's total during the month was 11.18 inches under the capital city, Peoria's total during the month was 11.18 inches under the capital city, Peoria's total during the month was 11.18 inches under the capital city of the capital city, Peoria's total during the month was 11.18 inches under the capital city of the capital city	month	day	year	blurb	key
